Summary

A passionate designer with a lot of unprofessional experience. I'm well-versed in Unity programming, so I can prototype and implement features on my own if needed. I have at least some experience in most gamedev disciplines, so I can clearly communicate with every member of a team. I love working with others and learning new things.

Experience

Personal 2021–Present

- Participated in 6 game jams as a designer and sometimes a programmer.
- Made two big open-source Unity tools, one of them featured on *80.lv*.
- Now leading a team of eight, working on an unannounced narrative game.

At NightCat Studios 2018–2021

- Shipped a commercial game to *Very Positive* reviews as an only designer.
- Drove the game's vision and made most decisions on gameplay and mechanics.
- Managed the complicated game structure and team members' tasks.
- Was responsible for social media and wrote all promotional material.
- Either wrote or edited a massive amount of in-game text.

In small teams 2016–2018

- Shipped 4 commercial games, one of them getting over 1400 steam reviews.
- Worked in various small teams as a designer and a writer.
